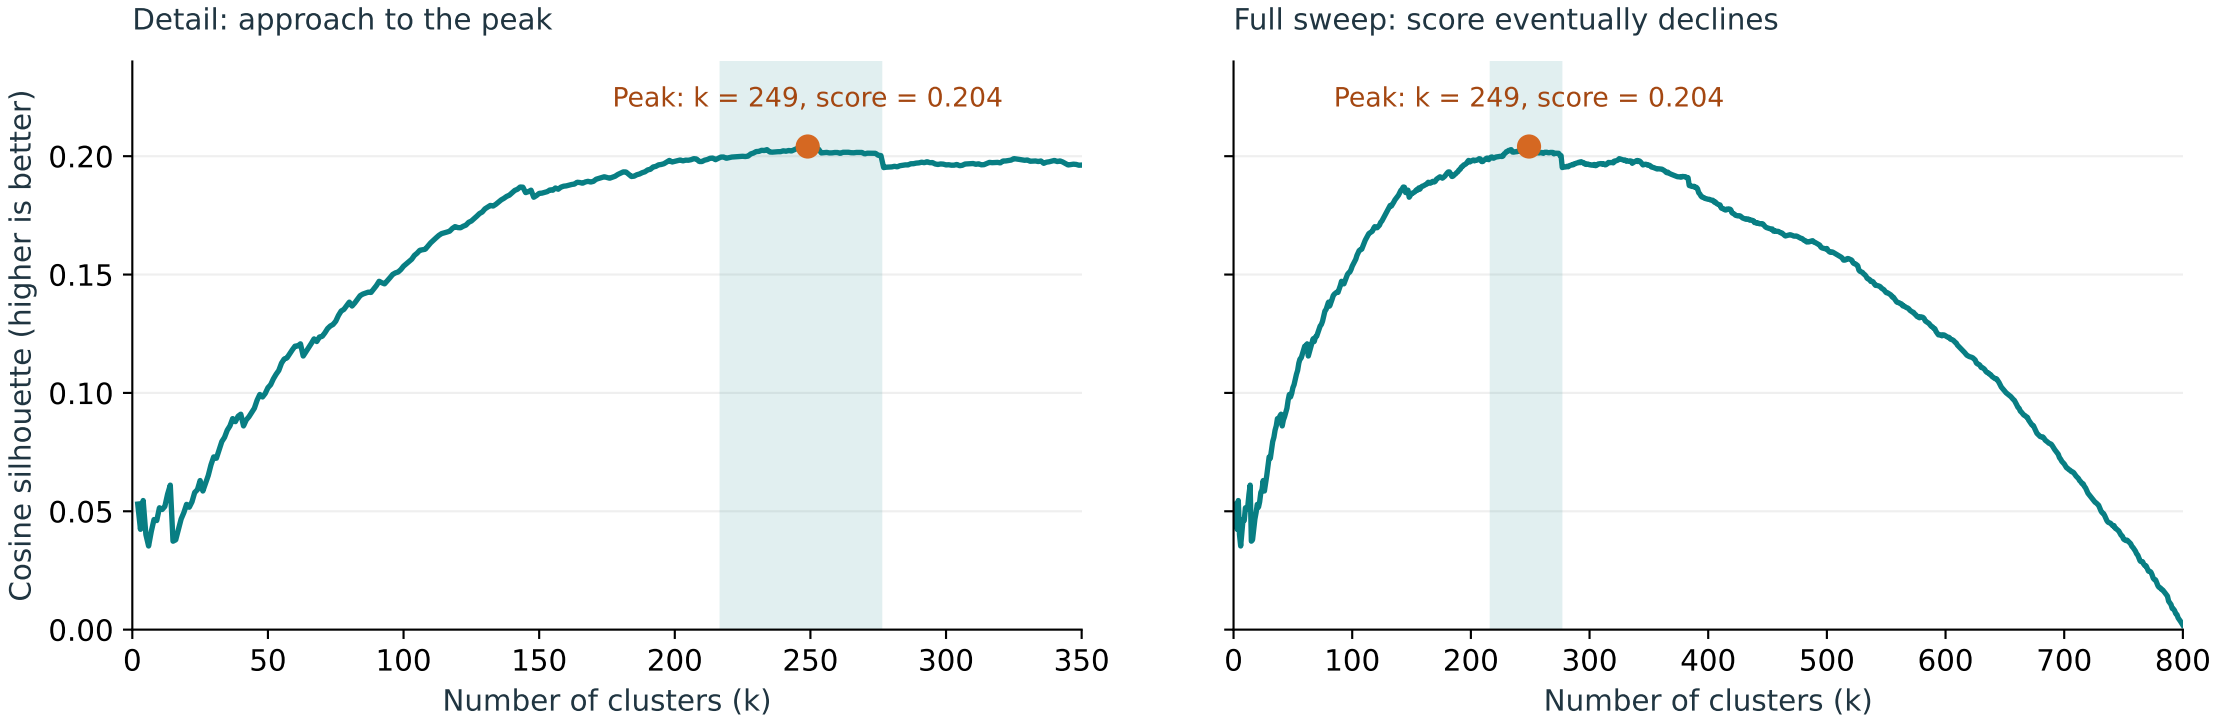
PETRI: silhouette levels off around 200–275 clusters

801 behaviour summaries · verification ≥ 7 · MPNet + L2 normalization · Ward hierarchy

Every cut from k = 2 to 800 scored on all 801 investigations.



Shaded band: k = 217–276, within 0.005 of the peak. This is a descriptive tolerance, not a confidence interval.

At k = 249: median cluster size = 3; 44 singleton clusters. The score remains modest despite the finer groups.
